

Style 240S Bellows Expansion Joint For Stainless Steel Pipe

The Victaulic Bolted Split-Sleeve Products (VBSP) style 240S stainless steel bellows expansion joint (formerly Depend-O-Lok OmniFlex) is designed to provide for thermal expansion and contraction, vibration reduction and lateral offset at pipeline joints. Bellows type expansion joints can accommodate three different types of movements; axial, lateral and angular. These movements can be concurrent. However, values for non concurrent movement cannot exceed values for a single concurrent movement. This can be achieved and needs to be specified at time of order. Each joint is built from 304, 316 or 321 stainless steel to accommodate specific application needs.

3 - 96/80 - 2400MM

In applications where flow induced vibrations, turbulent flow or erosion due to the material carried in the line is a concern, the Style 240S bellows expansion joint can be manufactured with an internal liner. Liners can drastically reduce noise and are also recommended for high velocity flows or pipelines operating at high temperatures.

Style 240S Bellows Expansion Joint For Stainless Steel Pipe

CONFIGURATIONS

The Victaulic Style 240S bellows expansion joint is available in a variety of end configurations to meet system needs. Common end configurations include the following:

- Plain end
- Beveled end
- AGS grooved
- With restraint ring (for use with style 234S couplings)
- Floating flanged
- Fixed flanged

This style of joint requires proper joint support to protect the bellows element from hypercompression and hyperextension. Limit rods may be provided with the joint for this purpose. Harness rods and lugs may also be used in conjunction with style 240S bellows expansion joint to accommodate full bulkhead thrust generated by internal pressure. In addition, optional bellow covers are available to protect the joint during installation and normal operation. Pipe support requirements are defined within the Application Data document. Please see publication 26.20.

Please contact the Victaulic Engineered Products group ProjectCoordination@victaulic.com to assist with specialty joints designed to meet the specific size, pressure, temperature and movement requirements of your system.

Style 240S Bellows Expansion Joint Quote Check Sheet

Send US, Asia, and Europe inquiries to: ProjectCoordination@victaulic.com or fax to: 610-923-3010
 To speak with a Customer Service representative in the US, please call 1-800-PICK-VIC
 In Canada, please e-mail vcoc_spr@victaulic.com or fax (905) 884-9774

The following information is required to ensure a proper quote. For application information, please see www.victaulic.com or call Victaulic® at (800) 841-6624.

Style 240S Bellows Expansion Joint For Stainless Steel Pipe

TESTING

Victaulic recommends due to the huge volume of air that can be involved in jobsite air testing and the nature of air or gas that is pressurized, that jobsite air testing should be limited to 25 psi/175 kPa or less.

WARRANTY

Refer to the Warranty section of the current Price List or contact Victaulic for details.

NOTE

This product shall be manufactured by Victaulic or to Victaulic specifications. All products to be installed in accordance with current Victaulic installation/assembly instructions. Victaulic reserves the right to change product specifications, designs and standard equipment without notice and without incurring obligations.
